PROFILE

Full Stack Developer (Spring Boot, Angular, React) and Junior Consultant at WinService, experienced in building scalable web applications across the full development lifecycle. Known for fast feature delivery and efficient ticket resolution by leveraging AI-assisted development while ensuring strong architecture, clean code, and high performance. Seeking to grow within a larger engineering environment and take on more complex technical challenges.

PROFESSIONAL EXPERIENCE

Full Stack Developer · WinService — Civil Registry System (WEVA)

Feb 2026 – Present

Client : État civil — National Biometric Enrollment Platform | Nouakchott, Mauritanie

- Designed and developed an **end-to-end national biometric enrollment system** for the Mauritanian civil registry, combining a desktop kiosk application for field operations and centralized RESTful backend services.
- Built a **JavaFX 17 desktop application** (MVC, FXML) with an 8-step guided workflow covering identity registration, genealogy, biometric capture, document scanning, and bilingual receipt generation.
- Integrated **Idemia MorphoKit SDK** for 10-fingerprint SLAP acquisition and **Topaz SigPlus** for digital signature capture via a Windows interoperability layer.
- Implemented **ICAO-compliant real-time photo validation** using OpenCV 4.7, performing facial detection and enforcing 16 quality criteria before submission.
- Developed secure RESTful APIs using **Java 17, Spring Boot 3, Spring Security (JWT), Swagger, PostgreSQL**, managing citizen records, biometric data, user roles, and reference data.
- Implemented an **offline-first architecture** with local persistence, automatic retry, and token refresh, ensuring continuous operations in low-connectivity environments.
- Delivered end-to-end document processing: **bilingual French/Arabic PDF generation**, document scanning (NAPS2), QR code generation, and secure client-backend synchronization.

Full Stack Developer · WinService — Birth Registration Registry

Mars 2026 – Present

Civil-records web platform to register newborns from hospitals & health centers — Angular 18 / Spring Boot | Nouakchott, Mauritanie

- Built an **Angular 18 / TypeScript 5.5** web application to digitize and centralize birth registration across Mauritania's administrative regions (Wilaya, Moughataa, Commune), with a bilingual French/Arabic interface.
- Implemented **JWT authentication with role-based access control** (Agent, Supervisor, Administrator, Auditor) using HTTP interceptors, route guards (AuthGuard, RoleGuard), and automatic session-expiry handling.
- Developed an **interactive dashboard with real-time statistics** and Chart.js / ng2-charts visualizations (births registered, pending, stillbirths), plus advanced multi-level geographic reporting and Excel (XLSX) export.
- Delivered **birth-record management**: paginated lists, advanced filters, bilingual naming (FR/AR), maternal-data validation, PDF certificate printing, operator & health-facility CRUD, and audit logs (user, IP, terminal).
- Architected **service-oriented code** with dynamic API configuration via `parametres.json` (APP_INITIALIZER), consuming a Spring Boot REST API (`/records`, `/newborns`, `/reports`), with light/dark theming.

Full Stack Developer (Consultant) · WinService — DIRCMAT

Nov 2025 – Feb 2026

Client : Ministère de la Défense — Système d'Information de Gestion des Matériels | Nouakchott, Mauritanie

- Delivered a modern RESTful API with **Spring Boot, Spring Data JPA, Spring Security (JWT), PostgreSQL**, managing weapons, vehicles, munitions, fuel, supplies, and personnel.
- Built an **Angular front-end** (TypeScript, HTML, CSS) fully integrated with back-end services for a seamless user experience.
- Acted as primary **technical liaison** with the Ministry: gathered requirements, presented progress, and ensured operational and security compliance.
- Implemented **CI/CD pipelines** via GitHub Actions with automated testing in Postman, following Agile Scrum to boost delivery speed and code quality.
- Delivered features efficiently by **combining AI-assisted development with manual code validation**, ensuring clean architecture, high performance, and maintainability.

- Developed a RESTful API using **Java 17, Spring Boot, Spring MVC, Spring Data JPA, Spring Security (JWT), Oracle SQL**, replacing the legacy PHP backend.
- Built an **Angular 17 front-end** (TypeScript, HTML5, CSS3) for a modern, responsive UI.
- Implemented **CI/CD with GitLab and Docker**, with automated testing (JUnit, Mockito, Postman) ensuring reliability and faster deployments.
- Followed **Agile Scrum, microservices architecture, and UML design** to improve maintainability and scalability.
- Achieved a **+30% application performance improvement**, enhancing portal scalability and maintainability.

- Developed a **full-stack web & mobile app** from scratch using Spring Boot (backend), Angular (web), React Native (mobile), and PostgreSQL.
- Implemented **user management, real-time availability, booking calendars, and secure JWT authentication**, improving reliability and user experience.
- Explored **AI-based recommendations** to optimize time slots and suggest intelligent bookings.
- Integrated **online payments (Bankily & Moov Money)**, reducing no-shows and streamlining revenue collection.
- Delivered a **fully functional, deployed product** that digitalizes reservations and eliminates double bookings.

- Designed and developed a **full-stack e-commerce platform** using Java 17, Spring Boot, Spring Data JPA, Spring Security (JWT), REST APIs, and MySQL.
- Built an **Angular front-end** (TypeScript, HTML5, SCSS, PrimeNG) with a modern, responsive, and smooth user experience.
- Implemented **secure authentication, product management, order tracking, and sales statistics dashboards** to support intelligent business decisions.
- Used **GitHub Actions, Docker, and Agile Scrum** for CI/CD, testing, and iterative development.
- Delivered a **fully functional prototype** with optimized page load times and a seamless, intuitive interface.

TECHNICAL SKILLS

- Programming Languages :** Java, Python, PHP, TypeScript, JavaScript, HTML/CSS
- Frameworks & Libraries :** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud, Hibernate, RESTful APIs, Microservices, Swagger/OpenAPI, Angular, Angular Material, React, Bootstrap, PrimeNG
- Database Systems :** PostgreSQL, Oracle, MySQL, SQL Server, MongoDB, Firebase
- DevOps / CI-CD :** Docker, Kubernetes, Docker Compose, GitLab CI/CD, Jenkins, GitHub Actions, YAML, Bash
- Testing & Quality :** JUnit, Mockito, REST Assured, Postman
- Security :** Spring Security, JWT, OAuth2
- Methodologies & Tools :** Git, GitHub, GitLab, Maven, Gradle, UML, Agile Scrum, Jira

EDUCATION

- Master Informatique Appliquée — Offshoring (IAO)

2023 – 2025
- Faculté des Sciences de Rabat | Rabat, Maroc
- Licence Mathématiques – Informatique (MI)

2020 – 2023
- Faculté de Nouakchott | Nouakchott, Mauritanie

LANGUAGES

Arabic — Native French — Fluent English — Technical
